

Credentialing POC — Architecture Diagram

Lean build: workbook → Supabase / Next.js → Salesforce demo

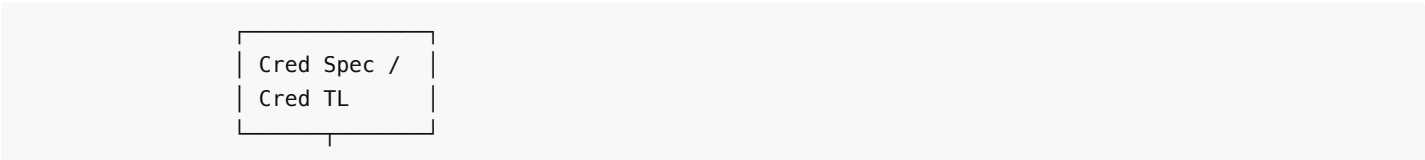

Document type: Architecture (PDF-ready)
Nature: Proof of concept — not production
Date: 12 August 2026

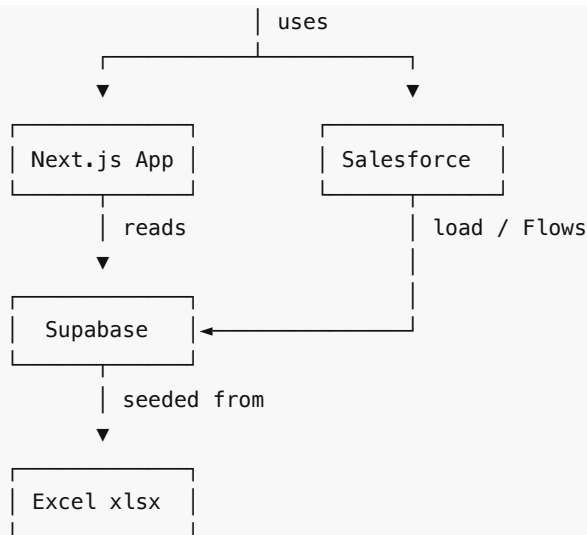

1. One-page picture

Principle: Workbook is seed truth → Supabase holds POC data → Next.js proves app UX → Salesforce proves TriWest workflow spine (intake, checklist, chase, recred, HITL) on standard pages.

2. Context diagram

Out of POC box (not connected): Aperture · Visual Cactus · Apttus · CAQH API · AP · MoveIT

3. Data model (shared logical shape)

```

organizations 1—* providers (practitioner | facility)
    |
    |—* credentials (license, DEA, board, malpractice,
    |               facility_license, accreditation, ...)
    |—* sanctions_checks (optional)
    |—* applications (new | recred)
    |
    |—* checklist_items
  
```

Salesforce maps 1:1 for the POC (`Provider__c` , `Provider_Credential__c` , `Credentialing_Application__c` , `Checklist_Item__c`). Outreach uses **standard Tasks**.

4. Runtime flows (what the POC proves)

4.1 Data path

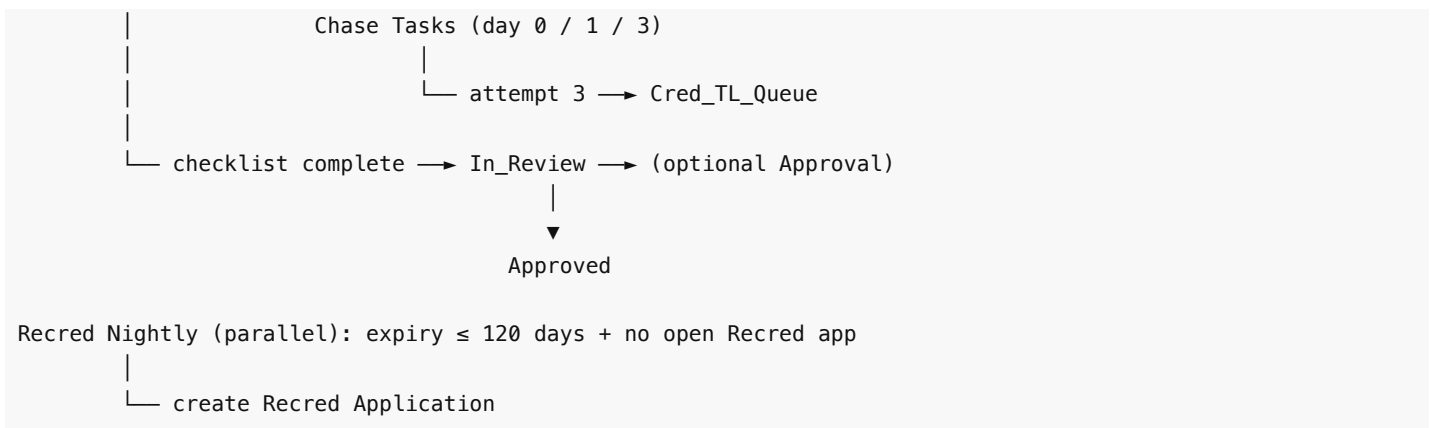

```

xlsx —seed—> Supabase —CSV/Data Loader—> Salesforce objects
    |
    |—REST/API—> Next.js pages
  
```

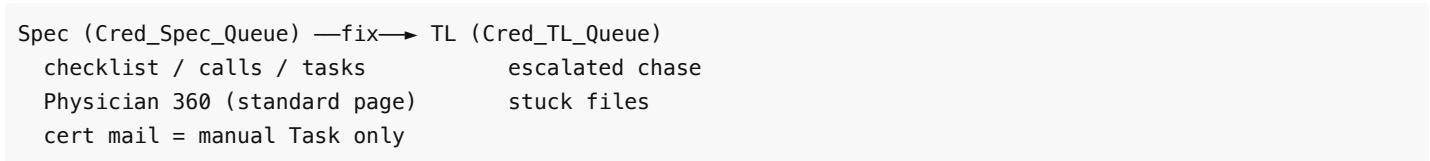

4.2 Salesforce workflow path

```

Intake Screen Flow
  |
  ▼
Application + Checklist rows
  |
  |— incomplete —> Status = Incomplete
  |
  |
  ▼
  
```

4.3 Human-in-the-loop

5. Component inventory (POC only)

Layer	Components
Seed	Provider_Credentialing_Dataset.xlsx (Providers + Facilities sheets)
Data	Supabase Postgres tables; import script
App	Next.js App Router, list/detail, expirations
SF data	4 custom objects; Account/org as needed
SF UI	Lightning App; standard Provider + Application record pages
SF automation	4 Flows (+ optional Approval); 2 queues
SF HITL	Spec → TL; cert mail Task

6. Explicit non-goals (keep the diagram honest)

Not on this architecture for the POC:

- MuleSoft / event mesh / bi-directional sync
- Custom LWCs for Physician 360
- Experience Cloud committee portal
- Live Aperture / VC / CAQH / AP adapters
- Cat B Med Director packet workspace
- QA 10% sampler, WMC gate, delegated 2–3K load
