

Salesforce POC Configuration Plan

Supabase Ingest · Flows · Standard Physician 360 · HITL

Document type: Salesforce POC plan (PDF-ready) — **not production**
UI approach: **Standard Lightning record pages + related lists** (no custom LWCs)
Upstream data: Supabase Credentialing POC dataset
Date: 12 August 2026

1. POC framing

Prove Salesforce can:

- 1. Hold provider/facility credential data loaded from Supabase
- 2. Run a small set of Flows (intake, checklist gate, chase, recred)
- 3. Give Cred Specs a **Physician 360** using **out-of-the-box Lightning pages**
- 4. Pause for humans (Spec work → TL escalation; optional committee Approval)

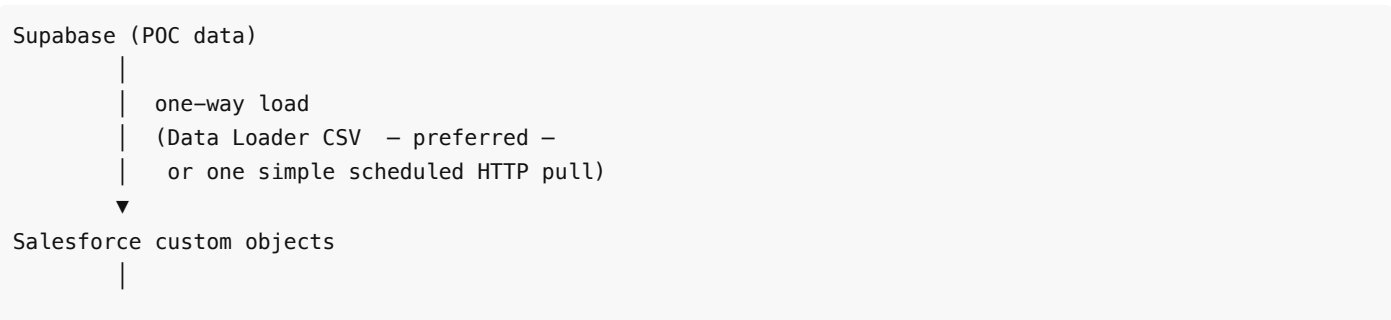

This is a **demo POC**. Do not introduce middleware platforms, Experience Cloud, OmniStudio, Health Cloud packaging, custom LWCs, or bi-directional enterprise sync.

2. UI approach (locked)

Decision	Choice
Physician 360	Standard Lightning Record Page on Provider__c
Facility view	Same record page; filter by Subject_Type__c = Facility
Page building	Lightning App Builder only
Components allowed	Highlight Panel, Record Detail, Path, Related Lists, Activities, standard Quick Actions / Screen Flow actions
Custom LWCs	Out of scope for POC
Custom Aura	Out of scope for POC
Dynamic Forms	Optional; not required

Physician 360 = configured record page, not a custom UI build.

3. Simple architecture

- └─ Screen Flow: Intake
- └─ Record-Triggered Flow: Checklist gate
- └─ Flow + scheduled paths: Outreach chase
- └─ Scheduled Flow: Recred due soon
- └─ Standard Lightning Record Page: Physician 360

Supabase supplies demo master data. Salesforce owns Application status, Tasks, and Approvals for the demo.

4. POC use cases (narrow)

ID	Show	Implementation
UC-01	Practitioner vs Facility intake	Screen Flow
UC-02	Checklist blocks In Review	Checklist related list + record-triggered Flow
UC-04	3-attempt outreach → TL	Flow scheduled paths + standard Tasks
UC-06	Recred candidates	Nightly Flow creates Recred Application
UC-07	Committee approve (optional)	One standard Approval Process
UC-12	Physician 360	Standard record page + related lists

Defer: WMC gate, Cat B / Med Director workspace, QA sampler, delegated bulk loads, DocGen products, Experience Cloud, Aperture/VC/CAQH, custom LWCs.

5. Data ingest (POC-simple)

Preferred

1. Export CSV from Supabase (organizations, providers, credentials, optional sanctions).
2. **Data Loader** upsert using External Id.
3. Re-run when demo data changes.

Optional

Named Credential + one Scheduled Flow or small Apex job to upsert Providers and Credentials.

Skip: MuleSoft, Platform Events mesh, mapping metadata framework, sync-error console, webhooks.

Supabase	Salesforce
organizations	Account (or Organization__c)
providers	Provider__c
credentials	Provider_Credential__c
sanctions_checks	Sanctions_Check__c (optional)
applications	Credentialing_Application__c

6. Salesforce components

6.1 Custom objects (four)

Object	Purpose
Provider__c	Practitioner or facility (Subject_Type__c, External_Id__c, NPI, names, org, cred dates, status)
Provider_Credential__c	License, DEA, board, malpractice, facility license, accreditation
Credentialing_Application__c	New Recred; Path; Status; Provider lookup
Checklist_Item__c	Required items; Complete checkbox

Outreach and escalations use **standard Tasks** (no Outreach custom object).

6.2 Application fields (minimum)

- Application_Type__c — New | Recred
- Path__c — CAQH | In_House | Facility
- Status__c — Draft | Incomplete | In_Review | Pending_Committee | Approved | Denied
- Subject_Type__c — Practitioner | Facility
- Attempt_Count__c
- External_Id__c

6.3 Queues (two)

Queue	Role
Cred_Spec_Queue	Specs
Cred_TL_Queue	Team Lead escalations

Optional Public Group: Cred_Committee for Approvals.

6.4 Permission sets

- Cred_Spec
- Cred_TL
- Cred_Committee (optional)

7. Physician 360 — standard record page recipe

7.1 App

Lightning App: **Credentialing POC**

Navigation: Providers, Applications, Tasks (standard items only).

7.2 Record page on Provider__c (App Builder)

Assemble **only** standard components:

Region	Standard component	Shows
Header	Highlight Panel	NPI, specialty / facility type, group, cred status, recred date
Main	Record Detail	Core provider / facility fields

Main	Related List — Credentials	Provider_Credential__c
Main	Related List — Applications	Credentialing_Application__c
Main	Related List — Checklist Items	Via Application, or related if master-detail allows
Sidebar	Activities / Open Activities	Tasks (chase, escalate)
Optional	Related List — Sanctions	If object loaded

7.3 Application record page (standard)

Component	Purpose
Path	Status guidance (Draft → ... → Approved)
Record Detail	Application fields
Related List — Checklist Items	Completeness
Related List — Open Activities	Chase / HITL Tasks
Highlights	Path, type, subject

7.4 Standard actions (no LWC)

Action	Type
New Application	Screen Flow quick action on Provider
Log Outreach	Action that creates a Task (Flow or standard New Task)
Escalate to TL	Screen or auto-launched Flow → reassign Cred_TL_Queue

7.5 List views (standard)

- Providers — Practitioners
- Providers — Facilities
- Applications — Incomplete (chase)
- Applications — Recred due / Pending Committee

Explicitly not in POC: custom LWC expiry badges, checklist progress rings, custom timeline components, FlexiPage Aura.

8. Flows (four)

Flow	Type	Behavior
Cred_Intake	Screen	Subject type, New/Recred, Path; create Application + checklist rows
Cred_Checklist_Gate	Record-triggered	Incomplete checklist → Status Incomplete; block In_Review
Cred_Outreach_Chase	Record-triggered + scheduled paths	Tasks on day 0 / 1 / 3; after attempt 3 → Cred_TL_Queue

Cred_Recred_Nightly	Scheduled	Expiry ≤ 120 days + no open Recred app → create Recred Application
---------------------	-----------	--

Optional: one Approval Process when Status = Pending_Committee.

9. Human-in-the-loop

Step	Who	Mechanism
Fix docs / call provider	Cred Spec	Checklist + Tasks on standard pages
Stuck / final chase	Cred TL	Queue reassignment
Committee (optional)	Approvers	Standard Approval Process
Certified mail	Cred Spec	Manual Task only — never auto-send

Escalation path for POC: **Spec → TL** only.

10. Build order

1. Create four custom objects, fields, two queues.
2. Data Loader load from Supabase CSVs.
3. Configure **standard** Provider + Application Lightning record pages (Physician 360).
4. Build Intake + Checklist Gate Flows.
5. Build Outreach Chase + Recred Nightly Flows.
6. Optional: one Approval Process.

Done when: Spec opens a synced provider on the standard 360 page, sees related credentials/apps, starts intake, is blocked by checklist, gets chase Tasks, and an expiring provider gets a Recred Application — **without any custom LWC**.

11. Out of scope

- Custom LWCs / Aura for 360 or checklist UI
 - Production cutover from Visual Cactus / Apttus
 - MuleSoft, event mesh, bi-directional sync frameworks
 - Health Cloud / OmniStudio / Experience Cloud as requirements
 - Cat B Med Director packet app, QA sampler, WMC service, delegated bulk loads
 - Real CAQH / Aperture / VC adapters
 - Automatic certified mail
-
