

TriWest Credentialing — Friction Map

Automation opportunities vs current-state flow

Document type: Analysis (PDF-ready)
Source: TriWest Credentialing current-state process map (TW Credentialing PDF, 2026-08-12)
Purpose: Identify friction that Salesforce (or similar) workflow can remove; feed POC scope
Date: 12 August 2026

1. Summary

The TriWest current-state map is heavy with spreadsheet, email, folder, and Visual Cactus status handoffs. Highest leverage for a **POC** (not full production build):

- 1. Classify intake early (Practitioner vs Facility)
- 2. Enforce a completeness checklist
- 3. Orchestrate the 3-attempt chase with human Spec work
- 4. Drive a recred clock from expiration dates

Adjacent systems named in the flow: Visual Cactus (VC), Apttus, Aperture, CAQH, AP, MoveIT, email/folders, WMC spreadsheet.

2. Friction → automation map

Area	Friction in current flow	Typical SF engine (full vision)	Impact	Effort	In lean POC?
Intake routing	No systematic Facility vs Practitioner (or CAQH vs non-CAQH); incomplete apps cannot be routed	Screen Flow + checklist / decisioning	Critical	High	Yes
Delegated / NetSub load	Manual spreadsheet entry of delegated providers (up to 2–3K)	Data import + record-triggered Flow	Critical	Medium	No — defer
Email / Apttus intake	Incoming email opened manually; attachments ad hoc	Email-to-Case / Flow + Files	High	Medium	No — defer
CAQH / screen data entry	Provider data and VC screens entered by hand; partial Aperture uploads	Integration + field mapping	Critical	High	No — mock via dataset
Aperture handoffs	TL builds queries/spreadsheets for daily/weekly Aperture jobs	Scheduled Flow + outbound jobs	High	High	No — defer
Completeness chase	3 attempts / 3 days to Provider/DCM; then cancel / term / PEND	Scheduled-path Flow + Tasks	High	Low	Yes
Status / system sync	Manual VC status flips; VC→AP export waits	Record-triggered Flow + integration	High	Medium	Partial — Path on Application
Cat A committee	Daily list + email voting; minutes in folders	Approval Process	High	Medium	Optional stretch

Cat B + Med Director	Packets via MoveIT; Med Director assigns; email size limits	Portal + Flow (later)	High	High	No — defer
QA / 10% audit	Spreadsheet sample; hard to aggregate	Scheduled sample + Cases	Medium	Medium	No — defer
Delegated annual audit	Random URAC sample outside SF	Scheduled sample rules	High	Medium	No — defer
Letter generation	Templates / large PDF extract / save to VC	DocGen (later); cert mail human	High	Medium	Manual Task only
Recred triggers	Mgr pulls recred ~4 months out	Scheduled Flow	High	Low	Yes (~120 days)
WMC eligibility gate	Manual external spreadsheet check	Lookup object + Flow	Medium	Low	No — defer
PDF conversion	Docs must be PDF before VC upload	Middleware (later)	Medium	Medium	No — defer
Multi-source updates	Updates spawn untracked Spec tasks	Tasks from a single queue	Medium	Medium	Partial — standard Tasks

3. Keep largely human (per flow notes)

Step	Guidance
Certified mail send	Term/denial cert mail remains manual
Med Director clinical judgment	Queueing can help; decision stays human
Committee clinical vote	Automate packet delivery/capture later; voting stays human
P&P alignment (pre-audit)	Policy judgment before NetSub/Delegated load

4. Engine fit (reference — full vision)

Scheduled / path Flows: Recred clock, Cat A daily list, Aperture jobs, 3-attempt outreach, delegated annual sample, monthly Cat B cycle.

Record-triggered Flows: Ready for QA → Auditor; Pending Committee → packet; Approved → letter + recred date; Non-response → PEND path.

Approvals + Experience Cloud (later): Replace Cat A email voting and Cat B MoveIT packets.

Intake checklist + decisioning: Explicit pain — incomplete apps; cannot route Practitioner vs Facility vs Delegated.

5. Suggested waves (full program vs POC)

Wave	Focus	POC?
Wave 1 — Foundation	Intake type + checklist; thin status model	Yes — this is the POC

Wave 2 — Orchestration	Chase cadence, recred, letters stub, optional Cat A Approval	Yes — chase + recred; Cat A optional
Wave 3 — Ecosystem	Aperture/CAQH/VC/AP, delegated load, committee portal	No — post-POC
